Department of Health Care Services
Addresses the Opioid Crisis
November 2019

Snapshot of the Opioid Epidemic in California

In 2018, there were more than 2,300 opioid overdose deaths in California or 5.5 deaths per 100,000 residents. Most opioid overdose deaths are prescription drug-related followed by heroin-related and fentanyl-related overdose deaths. Opioid overdose death rates vary by sex, with males having higher rates than females, and by ethnicity, with much higher rates among American Indian & Alaska Native populations. These rates also vary by county with particularly high rates in counties in the northern part of the state.

The California MAT Expansion Project

In an effort to address the opioid epidemic throughout the state, the California Department of Health Care Services (DHCS) is implementing the California Medication Assisted Treatment (MAT) Expansion Project. The project is funded by grants from the Substance Abuse and Mental Health Services Administration (SAMHSA) totaling $265 million. These grants were awarded to states by SAMHSA with the goal of increasing MAT capacity nationwide.

The California MAT Expansion Project aims to increase access to MAT, reduce unmet treatment need, and reduce opioid overdose deaths through prevention, treatment, and recovery activities. The project has a special focus on populations with limited MAT access, including youth, rural areas and American Indian & Alaska Native tribal communities. DHCS is implementing a variety of projects that span a range of settings where individuals with opioid use disorder (OUD) may seek help, including clinical settings, county and state criminal justice systems, and substance use disorder (SUD) treatment programs. The project also includes media campaigns, engagement of opioid safety coalitions, naloxone distribution, drug take-back efforts, and supportive housing.

What is Medication Assisted Treatment (MAT)?

MAT combines FDA-approved medications with counseling and behavioral therapies to deliver a “whole-patient” approach to the treatment of OUD. The use of MAT significantly reduces relapse rates compared to abstinence-based treatment programs. For OUD, the use of methadone or buprenorphine reduces overdose rates by more than 50 percent and reduces the rate of HIV and hepatitis C transmission.

Benefits of MAT:
• Reduce or eliminate withdrawal symptoms
• Reduce or eliminate cravings
• Block the euphoric effects of opioids
• Normalize brain chemistry that drives motivation & bonding with others

Commonly used FDA-approved MAT medications include:
• Buprenorphine: Inhibits the action of other opioids, prevents cravings and withdrawal symptoms, and lowers the risk of overdose. Can be prescribed by a DATA 2000 waivered physician, nurse practitioner, or physician assistant in a primary care office or other setting as well as an narcotic treatment program (NTP).
• Methadone: Prevents cravings and withdrawal symptoms and reduces risk of overdose when administered in an NTP.
• Naltrexone: Blocks the effects of opioids and reduces cravings. Can be prescribed or administered in any health care or SUD setting.

$265 million in funding from SAMHSA

30+ projects with 650+ access points for MAT

21,800+ new patients have received MAT

7,500+ opioid overdoses have been reversed with naloxone

MAT Expansion Project Highlights

The California Hub and Spoke System

The California Hub and Spoke System (H&SS) aims to increase access to MAT services throughout the state, particularly in counties with the highest overdose rates. This program was modeled after the Vermont Hub and Spoke system, which successfully increased access to MAT in a rural state with little treatment infrastructure.

The H&SS consists of narcotic treatment programs which are referred to as “Hubs” and serve as experts in treating OUD as well as office-based treatment settings which are referred to as “Spokes” and provide ongoing care and maintenance treatment. The CA H&SS is composed of 18 Hub and Spoke networks and over 200 Spoke locations (see Figure 1).

The H&SS has increased the availability of MAT for patients with OUD by increasing the total number of physicians, physician assistants and nurse practitioners prescribing buprenorphine.

H&SS results as of September 2019

- 46% of Spokes are federally qualified health centers (FQHCs), meaning that they provide care in underserved areas
- 22% of Spokes serve rural communities with some of the highest rates of opioid overdose
- 395 waivered prescribers in Spokes doubling the number of prescribers since the first month of the program
- 19,871 new patients starting methadone, buprenorphine, or extended-release naltrexone

The California Bridge Program—MAT in Emergency Departments and Hospitals

SUD patients routinely present to emergency departments in need of treatment. This program provides training and technical assistance to support and enhance evidence-based treatment for SUD within acute care settings throughout California. This program develops hospitals and emergency rooms into primary access points for the treatment of acute symptoms of SUD by way of motivation, resources, and encouragement for patients to enter and remain in treatment.

Participating sites address SUD as a treatable chronic illness by beginning MAT with buprenorphine immediately, as well as using harm reduction techniques, such as naloxone distribution, to minimize the risks associated with SUD. To date, 52 health care facilities are participating in this program, spanning 35 counties throughout the state.

Expanding MAT in County Criminal Justice Settings

Historically, individuals with SUDs have not been able to access MAT during periods of incarceration, despite an estimated 65 percent of individuals in the criminal justice system meeting the criteria for an SUD. Individuals leaving California Department of Corrections and Rehabilitation are 40 times more likely to die of an overdose in the first two weeks compared to CA’s general population. This is due to decreased tolerance and lack of treatment during incarceration.

Through the MAT expansion project, DHCS is funding a technical assistance program for counties interested in developing or expanding MAT to individuals in county jails and through drug courts. Two cohorts are underway with 29 total counties. Counties have participated in learning collaboratives, received monthly coaching calls, and technical assistance to develop or expand county-specific MAT programs in jails and drug courts. All participating counties have made measurable progress in expanding MAT programming within their jail systems.

The Naloxone Distribution Program

The Naloxone Distribution Project (NDP) aims to reduce opioid overdose deaths through the provision of free naloxone, in its nasal spray formulation. Entities apply to DHCS to have naloxone shipped directly to their address.

The program started October 2018, and over 1,000 applications have been received. Eligible entities include law enforcement such as police departments, county jails and probation; fire, EMS and first responders; schools and universities; county public health and behavioral health departments; and community organizations such as harm reduction organizations or community opioid coalitions.

In the first year of the program, the NDP has distributed more than 250,000 units of naloxone to 55 of the 58 counties in the state with the highest rates of naloxone distributed to counties with the highest rates of opioid deaths (see Figures 2).

Figure 2: Opioid Overdoses and Naloxone Distributed by County

**Naloxone Saves Lives**

In January of 2019, a mass overdose incident occurred in Chico, CA, in which a group of individuals overdosed on heroin laced with fentanyl, an opioid 50 to 100 times stronger than heroin. Chico police and fire authorities responded to the scene, and were able to save 12 of the 13 individuals using naloxone acquired through the program. This is one of several instances in which first responders have saved lives using free naloxone from the NDP.6

In January of 2019, a mass overdose incident occurred in Chico, CA, in which a group of individuals overdosed on heroin laced with fentanyl, an opioid 50 to 100 times stronger than heroin. Mother & Baby Substance Exposure Initiative

The goal of this initiative is to increase access to MAT for pregnant and parenting women with OUD, reducing unmet treatment need and opioid overdose related deaths. The aim is to decrease neonatal abstinence syndrome (NAS) severity and length of stay in the hospital, and to increase the number of mothers in long-term recovery. In an effort to achieve these outcomes, the project:

• Provides outreach that builds on the framework of existing treatment access points that screen and induct perinatal patients into treatment
• Develops and builds on existing protocols, guidelines, opioid safety bundles, and toolkits
• Distributes patient education materials specific for opioid use disorder and perinatal patients
• Provides technical assistance to stakeholders, treatment access points, etc.
• Develops a resource library for ongoing education

California Youth Opioid Response Project

The California Youth Opioid Response (YOR) Project focuses on providing prevention, treatment, and recovery services for youth age 12 to 24. The project funds:

• Expansion and implementation of MAT and OUD prevention and treatment services for youth, young adults, and their family members
• Development of protocols, guidelines, and toolkits to address the clinical judgement involved in developing an appropriate treatment plan for the delivery of services to youth populations
• Distribution of OUD prevention, treatment, and recovery education materials
• Coordination of learning collaboratives between stakeholders, prescribers, and clinicians

Tribal MAT Project

The Tribal MAT Project addresses the culturally unique needs of AI/AN populations. It aims to promote opioid safety, improve the availability and provision of MAT, and facilitate wider access to naloxone with special consideration for Tribal and Urban Indian values, culture, and treatments. There are a number of components to the project:

MAT Champions: Distribute naloxone and provide training to first responders, patients, and family members; provide tele-health equipment; conduct training and media campaign; and monitor Urban and Tribal Local Opioid Safety Coalitions. There have been at least 23 new Local Opioid Safety Coalitions established specifically to tribal populations. Additionally, the MAT Champions programs have distributed more than 5,000 naloxone kits to AI/IN organizations as of October 2019.

Project ECHO: Increase the number of prescribers for tribal and Urban Indian populations. Project ECHO has held 9 training sessions for clinicians on topics such as treating OUD, risk reduction/overdose prevention, safe usage of opioids, managing pain, treating pregnant women with OUD, and traditional healing practices and cultural humility.

Components of the Tribal MAT Project

Tribal Needs Assessment: DHCS has conducted a statewide needs assessment of AI/AN communities. The needs assessment identifies treatment gaps and will be used to inform future DHCS initiatives targeting these special populations.

Tele-MAT Project: The Tribal MAT Project includes treatment services performed through the Tele-MAT with Academic Detailing project. This project provides tele-medicine support, physician consultation, and OUD medical and psychiatric treatment services. As of March 2019, tele-MAT services have been implemented in 12 new Indian Health Programs (IHP). In addition, coaching programs have been implemented and on-site technical assistance has been provided to all 12 IHPs.

YOR funds 22 sites that remove barriers and fill gaps in service delivery for youth-related OUD services.
Other Related DHCS Efforts to Address the Opioid Epidemic in California

**Drug Medi-Cal Organized Delivery System (DMC-ODS)—Expanded Coverage for Medi-Cal Enrollees**

DHCS has also implemented the DMC-ODS pilot program, which seeks to expand access to SUD services for the Medi-Cal population. The program was established through a Medicaid Section 1115 waiver and aims to demonstrate that providing access to a full continuum of SUD services (see Figure 4) to people with Medi-Cal improves health outcomes while reducing overall health care costs.

County participation in the program is voluntary and, as of October 2019, 30 counties were implementing and providing services under DMC-ODS (see Figure 3).

The 30 counties currently implementing DMC-ODS represent more than 93 percent of the state’s Medi-Cal population.  

![Figure 3: Counties Implementing DMC-ODS](image)

**Figure 3: Counties Implementing DMC-ODS**

- Currently implementing DMC-ODS (30)
- Partnership Health Plan Counties with Plans Submitted to Implement DMC-ODS (8)
- Not currently implementing DMC-ODS at this time (20)

**Figure 4: Services Provided through DMC and DMC-ODS**

**DMC Standard Program**
- Outpatient drug-free treatment
- Intensive outpatient treatment
- Residential SUD services for perinatal women only (limited to facilities with 16 beds or fewer)
- Naltrexone treatment
- Narcotic treatment (methadone only)
- Detoxification in a hospital

**DMC-ODS Pilot Program**
- Multiple levels of residential SUD treatment (not limited to perinatal women or to facilities with 16 beds or fewer)
- Narcotic treatment programs expanded to include buprenorphine, disulfiram, and naloxone
- Withdrawal management (at least one ASAM level)
- Recovery services
- Case management
- Physician consultation
- Partial hospitalization (optional)
- Additional MAT (optional)

<thead>
<tr>
<th>Project/focus area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Clinical Services</strong></td>
<td></td>
</tr>
<tr>
<td>Substance use consultation line</td>
<td>24/7 telephone support for health care providers from addiction experts</td>
</tr>
<tr>
<td>EDs and hospitals</td>
<td>Support emergency departments and hospitals in integrating MAT services, including addiction counselors in select rural sites</td>
</tr>
<tr>
<td>Primary care and mental health clinics</td>
<td>Learning collaboratives for primary care clinics and behavioral health clinics on MAT integration; support for cross-sector collaboration</td>
</tr>
<tr>
<td>Tribal health</td>
<td>Funding and technical assistance for rural and urban tribes to integrate MAT into tribal health services; native specific Project Echo; needs assessment of native communities; suicide prevention and intensive case management for OUD treatment to increase access to and availability of MAT</td>
</tr>
<tr>
<td>Pregnant women and neonates</td>
<td>Technical assistance to support prevention, screening and treatment for pregnant and postpartum women, and family-centered care for opioid-exposed infants</td>
</tr>
<tr>
<td>Youth services</td>
<td>Prevention and treatment services for youth ages 14 – 26; establish youth-based recovery services in multiple locations</td>
</tr>
<tr>
<td>Physicians in training</td>
<td>Integrating MAT training for primary care residency programs</td>
</tr>
<tr>
<td>Supportive housing</td>
<td>Provide recovery housing and peer support for individuals experiencing homelessness with an OUD in Riverside and San Francisco Counties</td>
</tr>
<tr>
<td><strong>County and State Correctional Health</strong></td>
<td></td>
</tr>
<tr>
<td>County correctional justice systems and related services</td>
<td>Integrate MAT in county jails and ensure ongoing treatment at release; education and training for staff across the county correctional justice and social services systems (e.g., drug courts, child welfare); MAT training for DUI treatment programs and CHP</td>
</tr>
<tr>
<td>Prisons</td>
<td>Provide technical assistance to integrate MAT in California’s prison system as part of a broader SUD reform effort, including facilitating ongoing treatment at release</td>
</tr>
<tr>
<td>Juvenile justice</td>
<td>Establish an OUD peer support program for juveniles</td>
</tr>
<tr>
<td><strong>Statewide Systems and Programs</strong></td>
<td></td>
</tr>
<tr>
<td>Media campaign</td>
<td>Statewide media campaign focused on decreasing stigma around MAT treatment; regional media campaign focused on prevention and opioid safety for tribes</td>
</tr>
<tr>
<td>MAT access grants</td>
<td>Support new or expanding MAT services at &gt;200 sites in CA</td>
</tr>
<tr>
<td>Local opioid safety coalitions</td>
<td>Fund, convene, and coach leaders of local coalitions addressing the impact of the opioid epidemic in their communities</td>
</tr>
<tr>
<td>Mentoring and prescriber support</td>
<td>Mentoring services for new MAT prescribers</td>
</tr>
<tr>
<td>Transitions of care</td>
<td>Technical assistance to coordinate transitions across treatment systems in 10 counties</td>
</tr>
<tr>
<td>Naloxone distribution</td>
<td>Distributing naloxone in community and health care settings</td>
</tr>
<tr>
<td>Drug take-back</td>
<td>Setting up systems to allow safe disposal of unused controlled substances</td>
</tr>
<tr>
<td>Fentanyl monitoring</td>
<td>Setting up systems to allow real-time tracking of fentanyl overdose outbreaks</td>
</tr>
<tr>
<td>Prescription database</td>
<td>Improve functionality of CA’s prescription drug monitoring database, CURES</td>
</tr>
<tr>
<td>Prescriber education</td>
<td>In-person educational sessions for outlier prescribers, with a focus on MAT and naloxone</td>
</tr>
<tr>
<td>Evaluation</td>
<td>Evaluate impact of various projects in the CA MAT Expansion Project</td>
</tr>
<tr>
<td><strong>Substance Use Disorder Treatment Programs</strong></td>
<td></td>
</tr>
<tr>
<td>Drug Medi-Cal Organized Delivery System</td>
<td>Medi-Cal waiver program funding counties to provide coordinated SUD treatment across all American Society of Addiction Medicine levels of care, from outpatient to residential to inpatient</td>
</tr>
<tr>
